

## Release notes

The ForgeRock® Identity Platform is a comprehensive security solution providing a unified platform for access management, identity management, user-managed access, directory services, and an identity gateway.

Refer to the component product release notes for details:

Component	<i>What's new</i>	<i>Fixes</i>	<i>Deprecation</i>
AM 7.5	<a href="#">New AM features</a> <a href="#">New Amster features</a>	<a href="#">AM fixes</a> <a href="#">Amster fixes</a>	<a href="#">Deprecated AM features</a>
DS 7.5	<a href="#">New DS features</a>	<a href="#">DS fixes</a>	<a href="#">Deprecated DS features</a>
IDM 7.5	<a href="#">New IDM features</a>	<a href="#">IDM fixes</a>	<a href="#">Deprecated IDM features</a>
IG 2024.3	<a href="#">New IG features</a>	<a href="#">IG fixes</a>	<a href="#">Deprecated IG features</a>

When you follow the links, you find the release notes for each component product include information about:

- Deployment requirements and prerequisites
- New features and improvements
- Fixes, limitations, and known issues
- Compatibility changes, deprecation notices, and discontinued features

### IMPORTANT

Before you deploy a component product in production, make sure you review its release notes.

For details about changes to the sample deployments since the previous release, refer to [Upgrade](#).
